Hi Eric,

Sorry for not getting back to you sooner. The inventory is accurate. I was told that the lab uses the entire volume of sediment provided to run their test. After the test is completed the used sediments are discarded.

Thank you,

Bob

Samples

Hi Eric. Will do.

Subject: Round 2B Bioaccumulation Samples

Bob, Larry Burkhardt from EPA's Duluth lab is interested in working with the Round 2B laboratory bioaccumulation samples to explore the BSAF relationships. As you may be aware, the BSAFs change as a function of concentration. I was going through the sample inventory list that you provided earlier this year but did not see these samples listed. Can you find out if any of these samples still remain? I understand that Larry needs relatively large volumes of material. We would arrange for transport.

Thanks, Eric
